

JEAN PIERE CHOLAN LLAMOGA

Mechanical and Electrical Engineer

+51 947167058

jcholanl@uni.pe

www.linkedin.com/in/jpcamoga

SUMMARY

Engineer from the National University of Engineering, ranking upper tenth in Mechanical Electrical Engineering. Mechanical and Electrical Engineer with expertise in performance optimization, diagnostics, and operational strategies for power generation systems, including extensive experience with GE 7FA Gas Turbines, GE D11 Steam Turbine and MarkVIe control systems.

CAREER

UNIVERSIDAD NACIONAL DE INGENIERÍA (2017 – 2022)

Faculty of Mechanical Engineering

Upper tenth

CODINGDOJO – COLORADO TECHNICAL UNIVERSITY (2023 – 2024)

Bootcamp Data Analytics & Machine Learning

WORK EXPERIENCE

Performance Plant Engineer – FENIX COLBÚN

(Jan. 2024 – Now)

Fenix is a 570MW Combined Cycle Thermal Power Plant. I have developed a variety of activities such as Monitoring and data analysis for the performance supervision of a combined cycle plant, seeking solutions to improve process efficiency within the thermal power plant and reduce operational costs.

- Developed AI models for monitoring critical process variables
- Led and coordinated operations and maintenance teams for process optimization
- Supported in RCAs (Root Cause Analysis) of plant events
- Participated in thermal power plant improvement projects
 - Coordination with GE for the Full Stator Rewind of the Steam Turbine Generator
 - Support in the engineering design for the installation of a Diverter Damper in the HRSG
 - Thermal Balance of the HRSG, Gas Turbine and Steam Turbine
 - Performance indicators based on ASME PTC
- Application of PI Datalink and PI Vision to the Thermal Balance and reactive power control of plant
- Preparation of reports and dashboards in Power BI for plant performance indicators

Field Operator Program – FENIX POWER

(Nov. 2022 – Dec. 2023)

Mechanical Maintenance Trainee

(Nov. 2023 – Dec. 2023)

- Supervised field interventions on static and dynamic equipment, including piping, valves, pumps, and motors.
- Ensured the timely execution of maintenance tasks using SAP Work Order processes.

Field Operator Trainee

(Nov. 2022 – Oct. 2023)

- Played a critical role in the Major Outage (MM23 – 64,000 FFH) for two GE-7FA.04 Gas Turbines and a GE-D11 Steam Turbine.
- Trained extensively on MarkVIe and Yokogawa DCS systems for real-time plant control.
- Conducted power degradation analysis using GE Operational Excellence (OO) and Asset Performance Management (APM).
- Proposed and implemented improvements for the Seal Steam System and Hydrogen Generating Plant.
- Successfully evaluated a new air filtration system for gas turbines, optimizing efficiency and reducing operational costs.

CERTIFICATIONS

- | | |
|--|------------------------------------|
| • Combined Cycle Thermotechnical Fundamentals Course | EnginZone – Nov 2023 |
| • MarkVIe Control System Maintenance Course | GE Vernova – Sep 2023 |
| • Upgrade LCI Control System Maintenance Course | GE Vernova – Sep 2023 |
| • Managing Yourself Santander Scholarships Skills | Harvard Business School – Sep 2023 |
| • Data Science & Machine Learning with Python | CTIC – Aug. 2023 |
| • International Specialized Diploma in the Design, Operation, and Maintenance of Electricity Generation Systems (O&M of Thermal Power Plants, Hydroelectric Power Plants, Combined Cycle Power Plants) | CONSSAP – Mar 2023 |
| • Operation & Maintenance of Power Plants | E-Learning UNI – Nov 2021 |

PROJECTS

INFORMATION AND COMMUNICATIONS TECHNOLOGY CENTER CTIC – UNI (Sep. 2018 – Aug. 2021)

Smart Machines Laboratory – Kamayuc Team at European Rover Challenge ERC 2021 (Mar. 2021 – Aug. 2021)

- **Mechanical Area Manager**, responsible for the design, validation, and implementation of an explorer robot capable of conducting missions and withstanding extreme Martian-like weather conditions. (Kielce – Poland)

Smart Machines Laboratory & Smart City – Fenix Project (May. 2020 – Feb. 2021)

- **Mechanical Design** of the team that developed the Ventilator in Peru, approved by MINSA 2020 Resolution No. 3720, and the first prototype developed at the regional level and utilized by a COVID-19 patient. Stage TG5.

Smart Machines Laboratory – Kamayuc Team at University Rover Challenge URC 2020 (Dec. 2020 – Mar. 2021)

- **Mechanical and manufacturing designer**, responsible for the development and manufacturing of the robotic arm for maintenance tasks for the URC 2020 competition (Utah – EEUU).

Smart Machines Laboratory – WANKA (Sep. 2018 – Dec. 2020)

- **Mechanical Designer** Responsible for the design, simulation, and manufacturing of a payload for recording atmospheric parameters and seed dispersion during its flight trajectory. Successful launch in Tarbes, France, for the C'Space competition organized by CNES.

SKILLS

Programming	Python, MATLAB, C++
Control Systems	MarkVIe, PLCs, LCI Systems, Yokogawa DCS
Software	PI Vision, Power BI, AutoCAD, SolidWorks, Ansys Workbench
Technical Competence	P&ID interpretation, thermal balance analysis, RCA methodology

PUBLISHING PAPERS

Pressure and Volume Control in a new Emergency Mechanical Ventilator based on PLC and Industrial Pneumatic Parts in Peru Nov 2021

- <https://doi.org/10.1109/EMBC46164.2021.9630493> *Engineering in Medicine and Biology Society (EMBC), IEEE*

High-Altitude Balloon Launch for satellite instruments validation aimed at Effective Student Learning Dic 2019

- <https://iaaspace.org/publications/book-series/#PUB-BookVol2> *Symposium on Small Satellites, IAA Number 2*

LANGUAGES

English	B2
Portuguese	A2

SOFT SKILLS

Resilient	Adaptability
Effective Communication	Analytical Thinking
Teamwork	Conflict Resolution
